

Active substance and plant protection product quantity notification for the previous calendar year

Pursuant to § 6 (1) of the Plant Protection Products Ordinance 2011, BGBl. II No. 233/2011 as amended (hereafter "Plant Protection Products Ordinance 2011"), are

- **Authorisation and licence holder**
- **Holders of distribution extensions pursuant to § 13 (1)** Plant Protection Products Ordinance 2011

obliged to notify the Federal Office for Food Safety in writing within two months of the end of the calendar year:

1. the names (according to internationally recognised or equivalent customary names) and the quantities of the individual active substances of the plant protection products placed on the market by them in Austria each year and of the plant protection products shipped by them from Austria each year; and
2. the trade names, authorisation numbers and quantities of the individual plant protection products placed on the market by them in the domestic market (Austria) each year and which were shipped out of the domestic market by them each year.

It is requested that the reports be submitted exclusively using the report forms, which are available in electronic form on the homepage of the Federal Office for Food Safety at

<https://www.baes.gv.at/zulassung/pflanzenschutzmittel/mengen-meldung>

and to submit it electronically to the following address:

E-mail address: psm-mengenmeldung@baes.gv.at

If no plant protection products were placed on the market in Austria or exported in the previous calendar year, a zero report (see Explanatory notes) is requested.

With regard to the domestic sale, the person who first placed the product on the market is obliged to declare it. If the first placing on the market is partly or entirely not carried out by the authorisation or licence holder, but by one or more distributors, it is requested that the authorisation or licence holder contacts the distributor(s) in order to avoid double reporting, but on the other hand to ensure that all reportable quantities are actually reported. If the notification of the quantities of plant protection products and active substances placed on the market is made by the distributor(s), the authorisation or licence holder is requested to indicate by e-mail via which company/companies the notification will be made.
